

Islandora Common Digital Library Platform Project Plan
Priscilla Caplan
28 August 2012

The detailed Islandora project plan is being managed in a Web application called Zoho, which requires a userid and password for use. Members of the DISC Islandora Subgroup have access to the project in Zoho, and I would be happy to add any CSUL member who wants to be able to view the project plan. Just send me (pcaplan@ufl.edu) a request by email.

The project plan is based on implementing Islandora version 7, which was released in an incomplete beta version in August. Currently the only module fully functional in version 7 is Basic Image (that is, non-JPEG2000 images). Other modules currently available in version 6 are expected to be ported by the end of October. The implementation plan reflects this.

The plan is designed to get the system up and running by July 1 2013 for 80 percent of the content currently in DigiTool and other systems: books, serials, images (photos, maps, etc.), sets of related images, single PDFs, ETDs, and EAD finding aids. Other content types will follow as early as possible the following FY. Institutional repository capability is slated for 2013/14. Other modules that should be ready for implementation in 13/14 or 14/15 include ETD creation, digital humanities, and chemistry; we will have to assess interest in these.

Newspapers is a special case because a Newspaper module is under development by the University of Prince Edward Island. (UF's Mark Sullivan reviewed and approved the specification.) We do not know when this will be ready and we do not know what will be involved in the migration; I will put newspapers on the project plan when more information is available..

1st & 2nd Quarter 2012/13 Milestones

September 15	Basic Image ingest, display and edit Simple metadata entry form
October 15	Unattended Batch Load Basic Image batch migration ability Full MODS data entry form
October 31	MARC support (ingest and display) Basic permissions
November 9	Books ingest, display, and edit
November 23	Large Image (JPEG2000) ingest, display, and edit Large Image batch migration ability
December 1	PDF ingest, display, and edit Multi-user architecture and basic permissions
December 15	PDF batch migration ability Books batch migration ability EAD (finding aids) ingest and display

3rd Quarter 2012/13

- EAD batch migration ability
- Restrictions on access
- ETD ingest, display and edit
- ETD batch migration ability
- Books PDF generation and print capability
- Batch migration ability for related images loaded as Books

4th Quarter 2012/13

- Serial hierarchy
- Theming for sites (look and feel)
- Archon to Islandora
- Shopping cart
- Export
- Actual batch migrations for Books, Serials, Large Image, Basic Image, ETD, EAD, and Related images loaded as Books
- System live and online target July 1, 2013

2013/2014

- Improved related images
- Audio ingest, edit, and display
- Audio albums ingest, edit and display
- Audio batch migration
- Video
- Oral History
- Oral History batch migration
- Institutional repository
- Islandora to FDA
- OAI metadata harvesting

Timing unknown
